

BALEEN OR TEETH?

Hebridean Whale and
Dolphin Trust

In each **row**, cross out the letters that appear **3 or more** times. The remaining letters will spell out different types of whales that have been spotted around the west coast of Scotland. Once you have discovered the types of whales hidden in the grid, you must then decide if they have teeth or baleen plates and write them in the correct box at the bottom of this page.

Check out HWDT's website for extra help if you get stuck.

The first whale has been found for you and written in the correct box.

s	a	k	s	s	i	m	l	m	y	a	l	y	a	e	m	y	r
